SOI MESSAGE - 23 AUGUST 1995

SOI AVERAGES / PHASE	
May 95	- 8.2
June 95	- 2.1
July 95	+ 3.1

Last 30 days	+ 1.8
Last 90 days ▲	- 1.0

SOI Phase 5 (near zero) on 31 Jul 95	
All values subject to revision by Bureau of Meteorology	

▲ See AUSTRALIAN RAINMAN for effects of SOI on rainfall at your location.

REVIEW OF CLIMATIC FORECASTS AND INFORMATION

Established climate forecast systems show the probability of receiving ABOVE MEDIAN rainfall for the next three months is about 30% to 50% over most of Queensland and New South Wales. There are some isolated patches on the Darling Downs where the probability reaches about 60% to 70%. However, much of this rainfall would be due to thunderstorm activity, which tends to be patchy. Thus generally when we have experienced a similar SOI pattern to the current one, over the last 130 years, rainfall has been above median in about 1-in-3 to 1-in-2 years (depending on location).

There is a high probability of receiving late-season frosts this year.

Recent passages of the 30- to 50-day Oscillation have not been associated with significant rainfall over Queensland. In addition,

the timing of the oscillation has been very erratic. The next passage of the 30- to 50-day Oscillation is expected during the fourth week in August.

There has been a slow rewarming of the sea surface in the eastern equatorial Pacific Ocean over the last two months. However, temperatures from around the International Dateline to the far eastern equatorial Pacific are now mostly near average. Development of a large pool of cooler-than-normal water in the Tasman sea is also an unfavourable trend. Sea-surface temperatures are still warmer-than-normal off the southern half of Western Australia.

The average SOI over the last 30 days was +1.8 . The probability of exceeding median rainfall over the next three months, ranges from about 30% to 50% in most of Queensland and New South Wales.

THE BOTTOM LINE

We continue to recommend caution when making property management decisions.

To obtain more information for your location, we recommend combined use of the AUSTRALIAN RAINMAN package and the Bureau of Meteorology's Seasonal Climate Outlook.

The next SOI HOTLINE update will be on the 30th of August.
